

**Program:** Chemistry (15025012071P6)

**Course:** RESEARCH SEMINARS I

**Code:** PPGQU0024

**Workload:** 40 hours

**Credits:** 02

**Syllabus:**

This course aims to provide master's students with a systematic guidance space for structuring their research projects, contributing to the development of their master's dissertation. The basic requirements of the project will be verified, including: defining the research question; determining the object of investigation; relevant and pertinent literature review; adequacy between the problem and the methodology to be used; as well as the feasibility and application of potential scientific findings. The presentation and defense of the project will be evaluated by a committee composed of faculty members from the program, including the responsible of the course and the student's advisor.

**Bibliography:**

The bibliography will be defined by the advisor in agreement with the instructor responsible for the course.
